COVID-19 Weekly Surveillance Report

23rd June 2022

Public Health Directorate

Introduction

This report is a summary of indicators which are used to understand the dynamics of the spread of COVID-19 on the Isle of Man.

This report will be published each Thursday for data up to and including the previous Sunday e.g. 12th August is for data up to 8th August.

The COVID-19 results are a combination of positive PCR and LFT tests.

The report has been compiled by the Public Health Intelligence Team using data from Manx Care, the Civil Registry and the Lateral Flow Test (LFT) system.

Wave Surveillance

- This week saw an increase in case numbers across all age groups. The effective reproduction number (R_t) was 5.15 this week, an increase from last week's value of 4.67. It is worth noting that R_t values, as seen in the daily R_t table (Appendix 1), are sensitive to large fluctuations when daily case numbers are small. Therefore, consideration should be taken of other epidemiological data to gain a true understanding of patterns of spread.

- Case ascertainment and calculation of the reproduction number is, of course, dependent on patterns of testing and reporting so it is likely that there are more cases than are currently notified. This caveat has applied throughout the pandemic when COVID has been transmitting on Island, although the change to LFD self testing and self reporting may have impacted on that to an unknown extent. Further changes to testing guidance published on 1 April are likely having an additional impact. This week we has seen an increase in seven day average daily reporting from 81 to 228. This increase is in line with the increase in cases across the UK shown in the ONS Infection Survey.

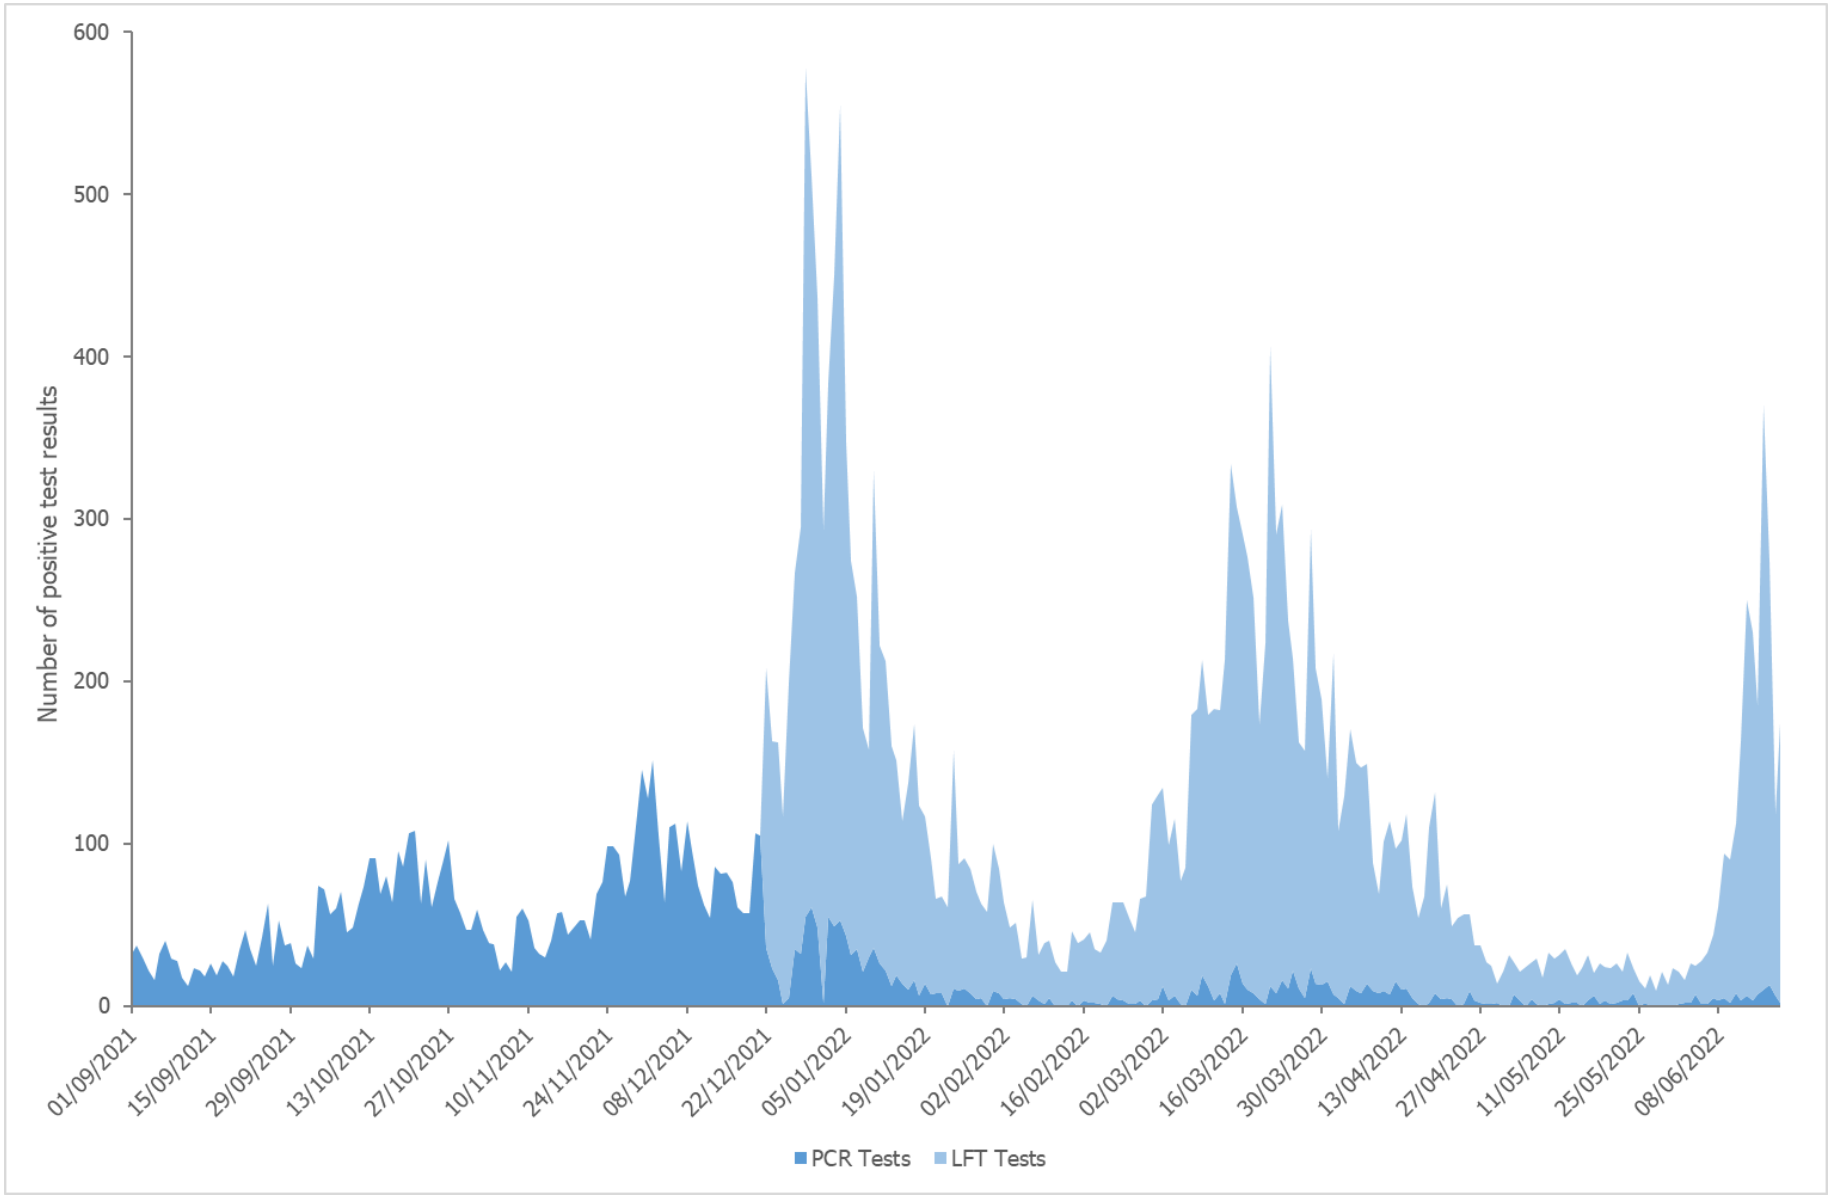

- Over the TT period the Island has seen a large influx of people, as well as a number of Bank Holidays and events that are likely to affect patterns of spread. We are likely already seeing the early effects of this but will become clearer in reports over the next couple of weeks.

- It should be noted that due to the differences in testing strategies on the Isle of Man compared to the UK, comparisons are shown for guidance only.

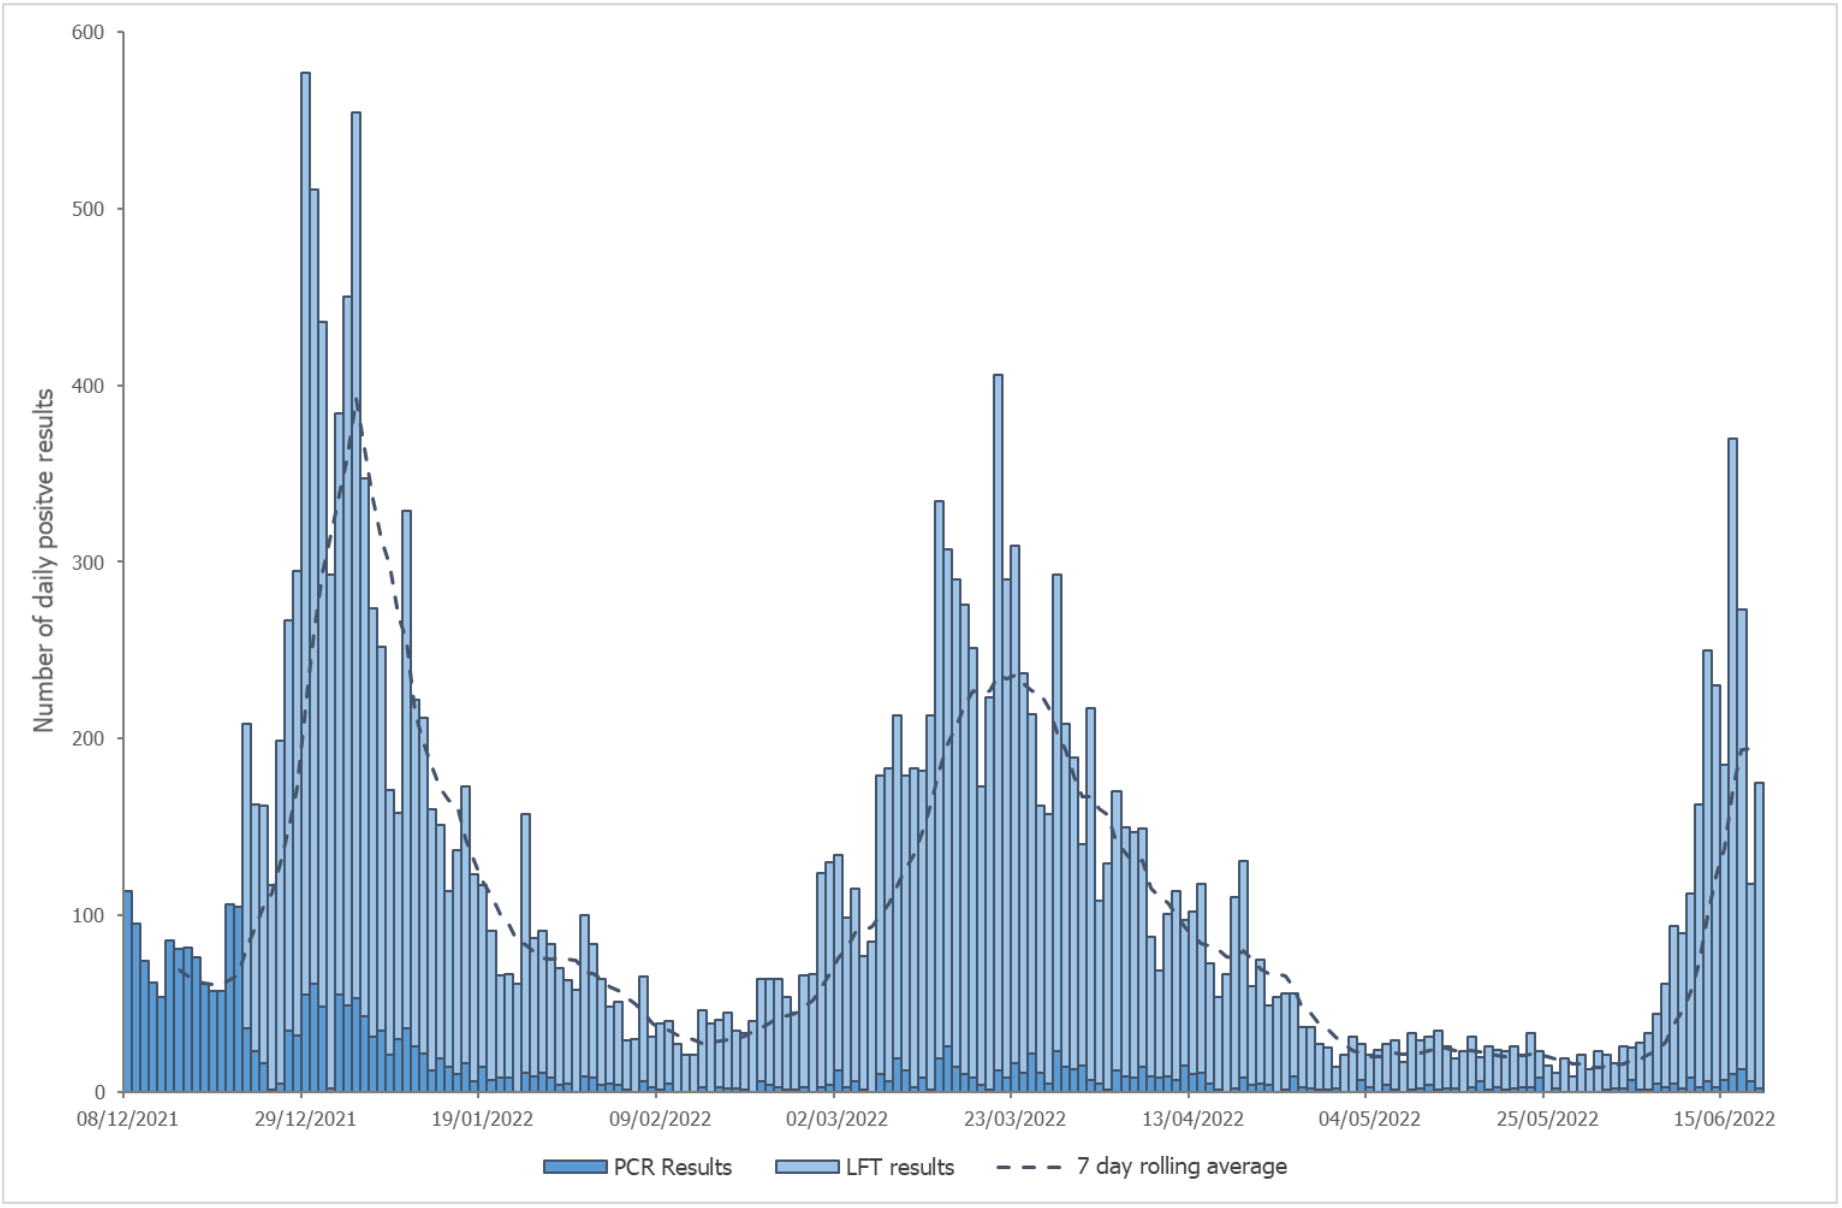

Key Points

- The current 7-day average for reported positive results is 228.
- The trend of case numbers reported from testing shows a further increase this week.
- The effective reproduction number (R_t) was 5.15 this week.
- The snapshot of the Hospital shows 18 patients currently admitted with a COVID positive status.

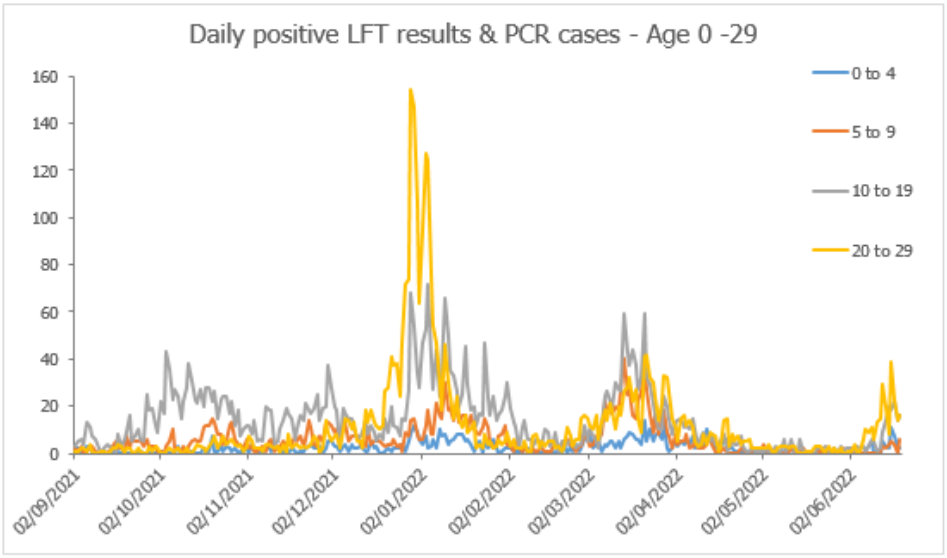

Positive COVID-19 Tests

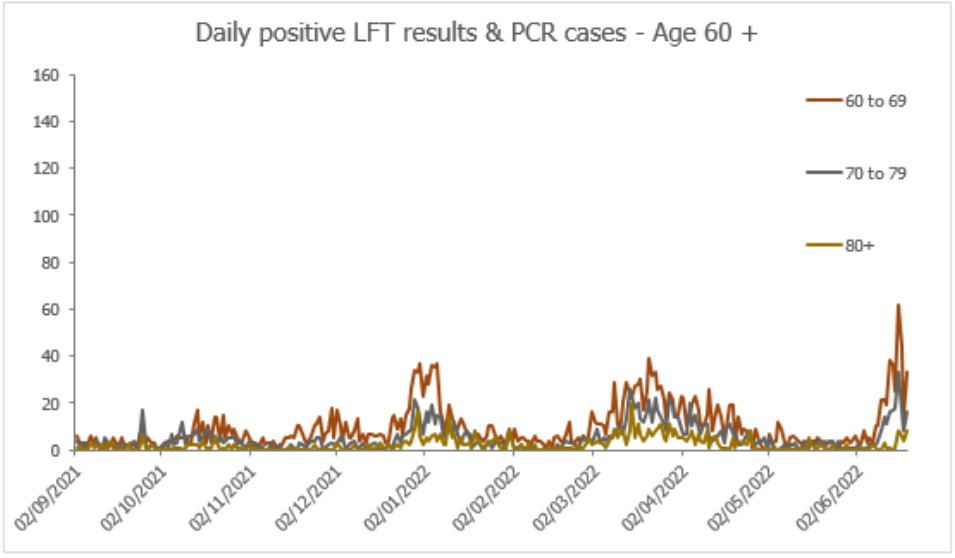

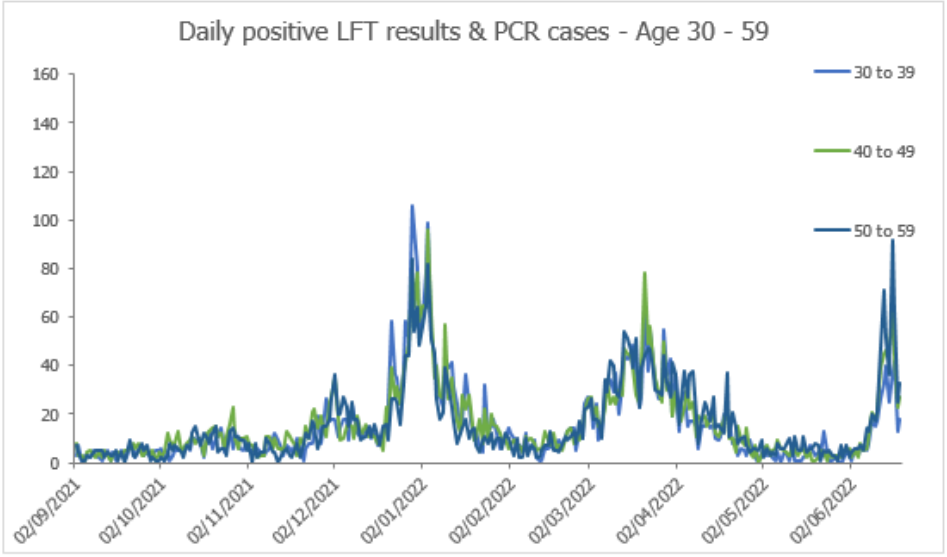

Daily Positive Results – 4th Wave

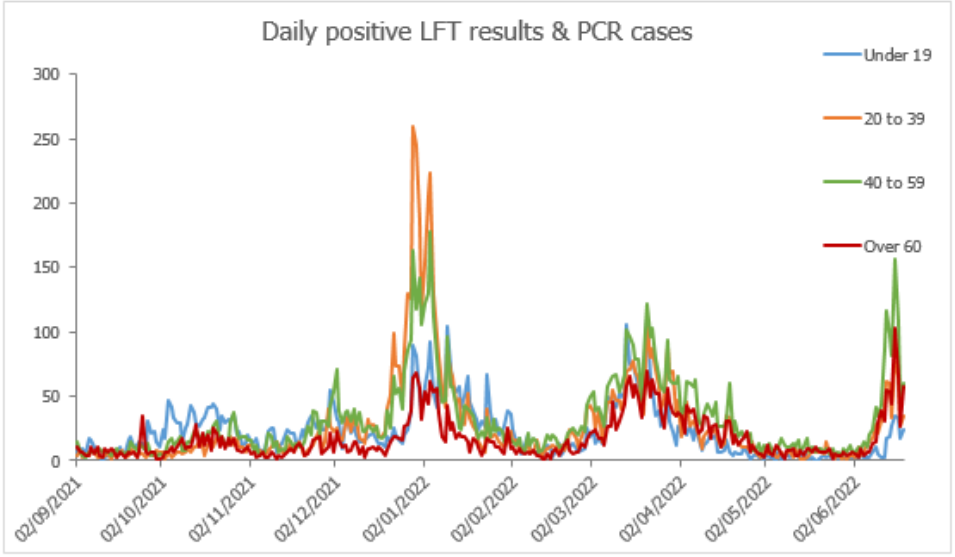

Age Group Analysis

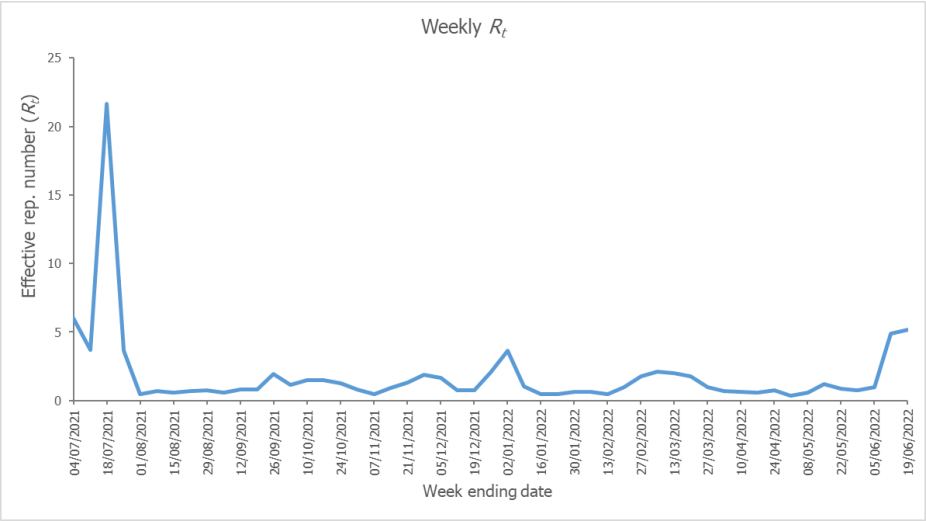

Effective Reproduction Number (R_t)

Latest 7 day
R_t = 5.15

- The Effective Reproduction Number (R_t) represents the number of secondary infections generated by each case over time 't' (over a week as presented here) and can be dramatically modified by applying effective interventions.
- When $R_t > 1$ there are more new infections than recoveries, thus the number of infected individuals in the population is increasing, while for $R_t < 1$ the number of infected individuals must be decreasing for the opposite reason.
- The calculation of R_t is as follows[1]:

$$R_t\,(t_i) = \frac{\text{New Infections}}{\text{New Recoveries} + \text{New Deaths}}$$

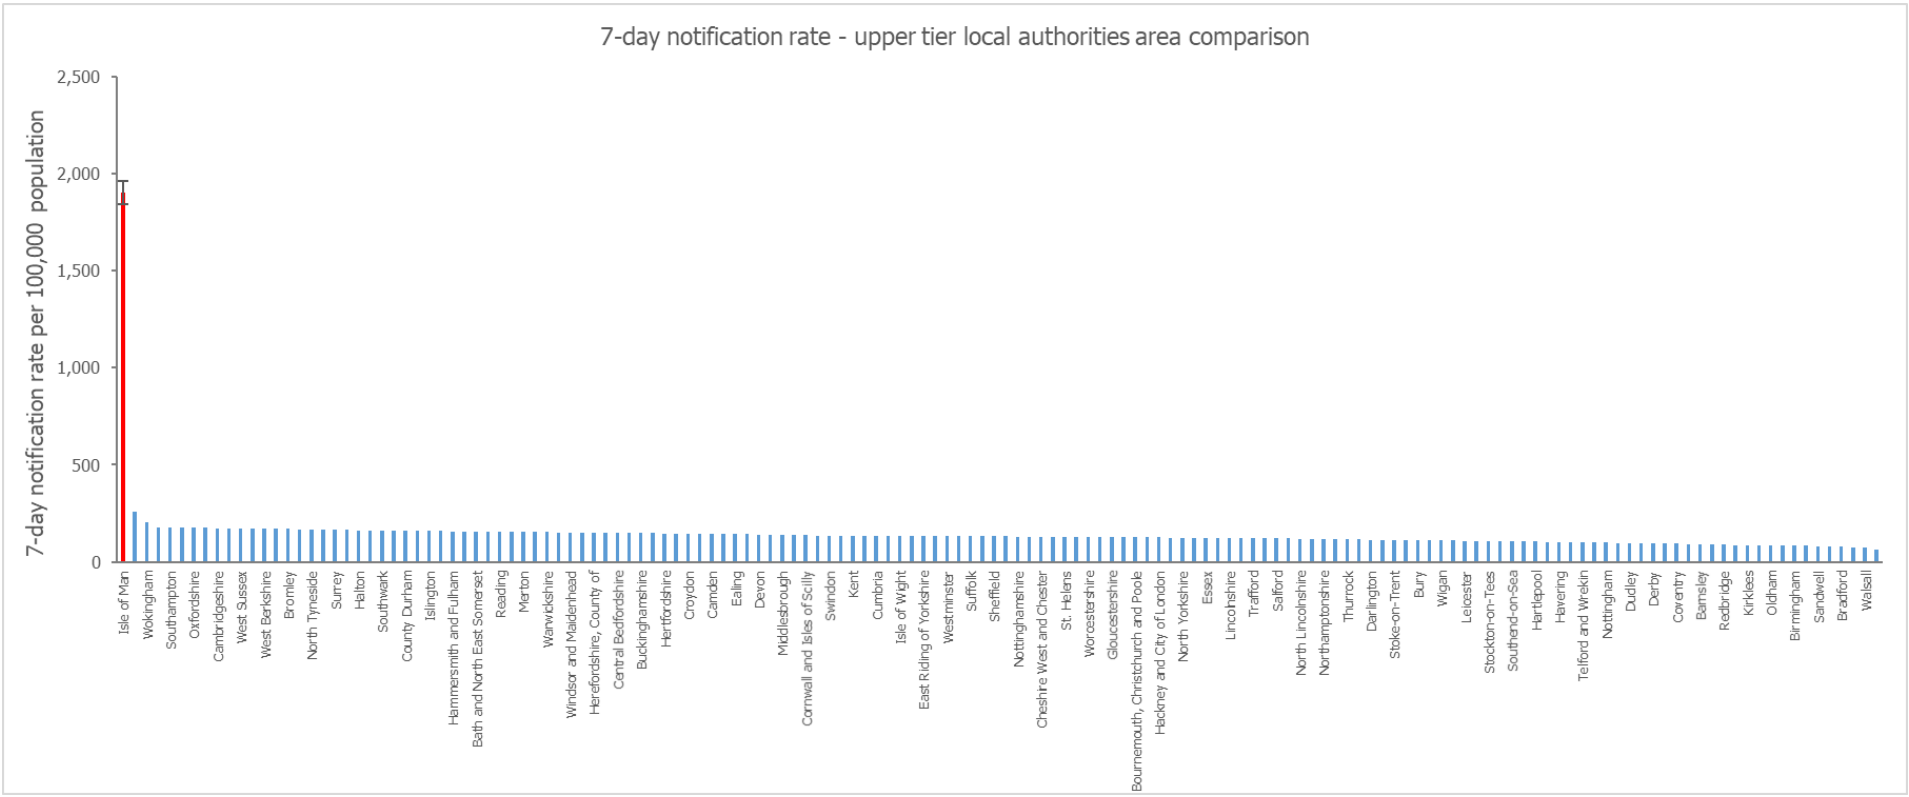

- The UK uses a more complex method of estimating R_t which we are not able to replicate here. The use of this simplified methodology limits the robustness of comparing our R_t value with UK estimates, however it provides a useful comparison between different time periods on Island. New Recoveries is calculated using the presumed 10 day recovery period from positive test result.
- A full table of daily R_t values for the current wave is available in Appendix 1.
- It is worth noting that R_t values, as seen in the daily R_t table (Appendix 1), are sensitive to large fluctuations when daily case numbers are small. Therefore, consideration should be taken of other epidemiological data to gain a true understanding of patterns of spread.

7-day Notification Rate Area Comparison

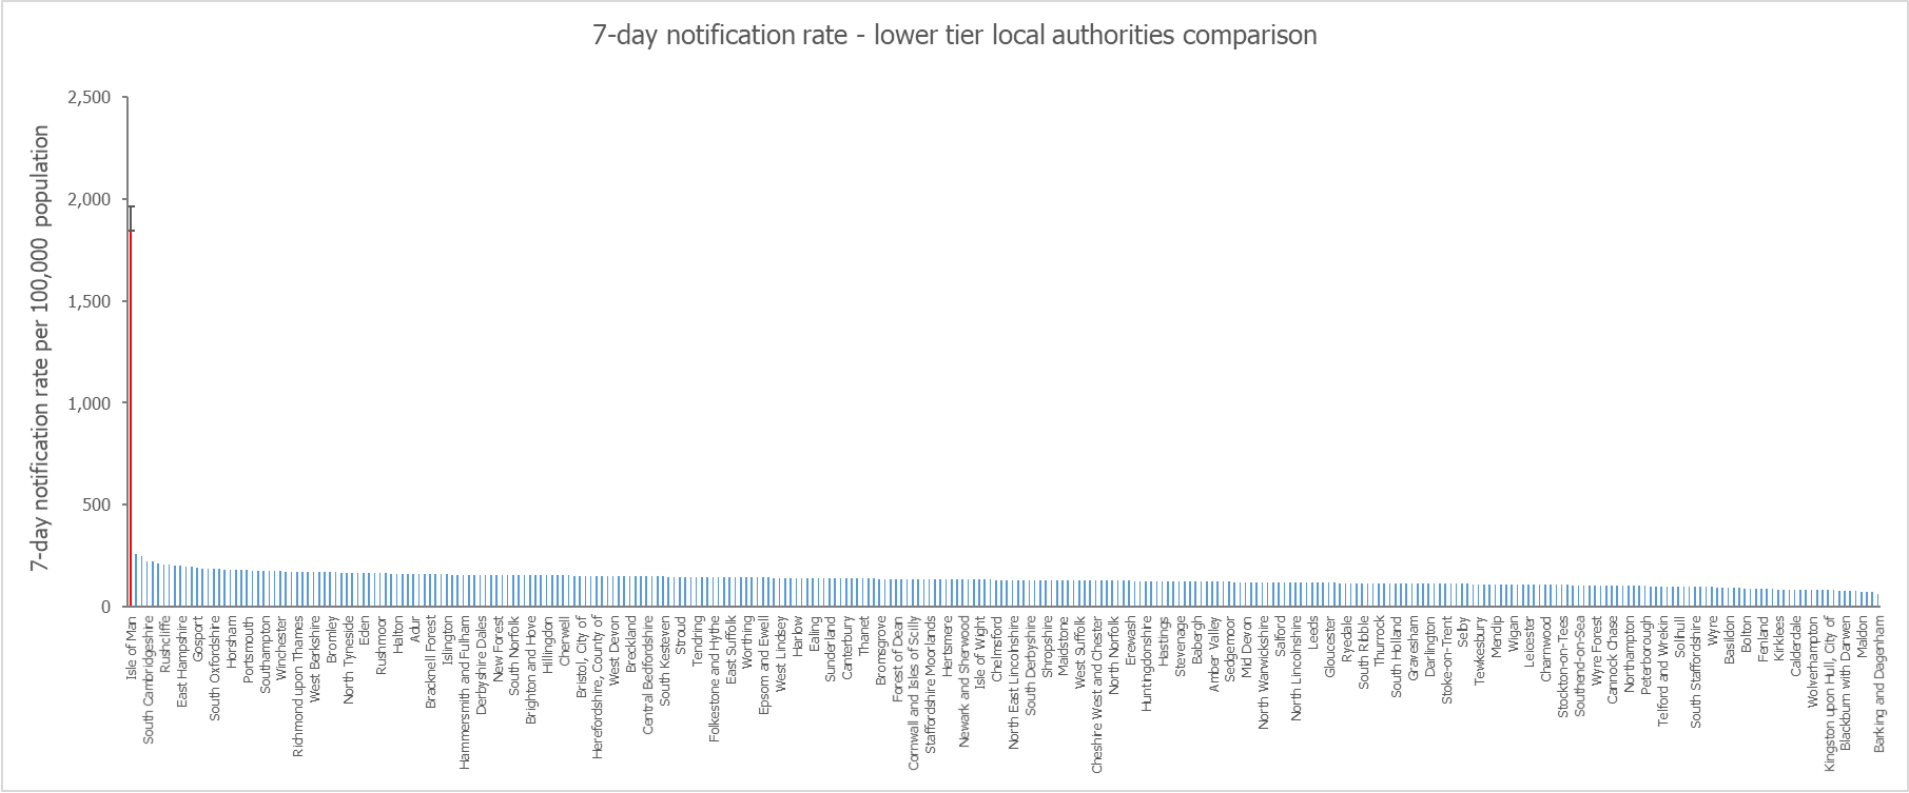

It should be noted that there are two reasons why data may not be shown. Firstly, data is not shown for areas with fewer than 3 cases at middle layer super output area (MSOA) level, to protect individuals' identity. Secondly, data may not be shown if the data is delayed or unavailable.

7-day Notification Rate – Upper Tier LA Comparison

The Isle of Man (shown in red), has the highest 7-day notification rate per 100,000 population when included in the upper tier local authorities of the UK. It should be noted that the differences in testing availability on the Isle of Man compared to areas in the UK are likely to impact the 7-day notification rate data.

7-day Notification Rate – Lower Tier LA Comparison

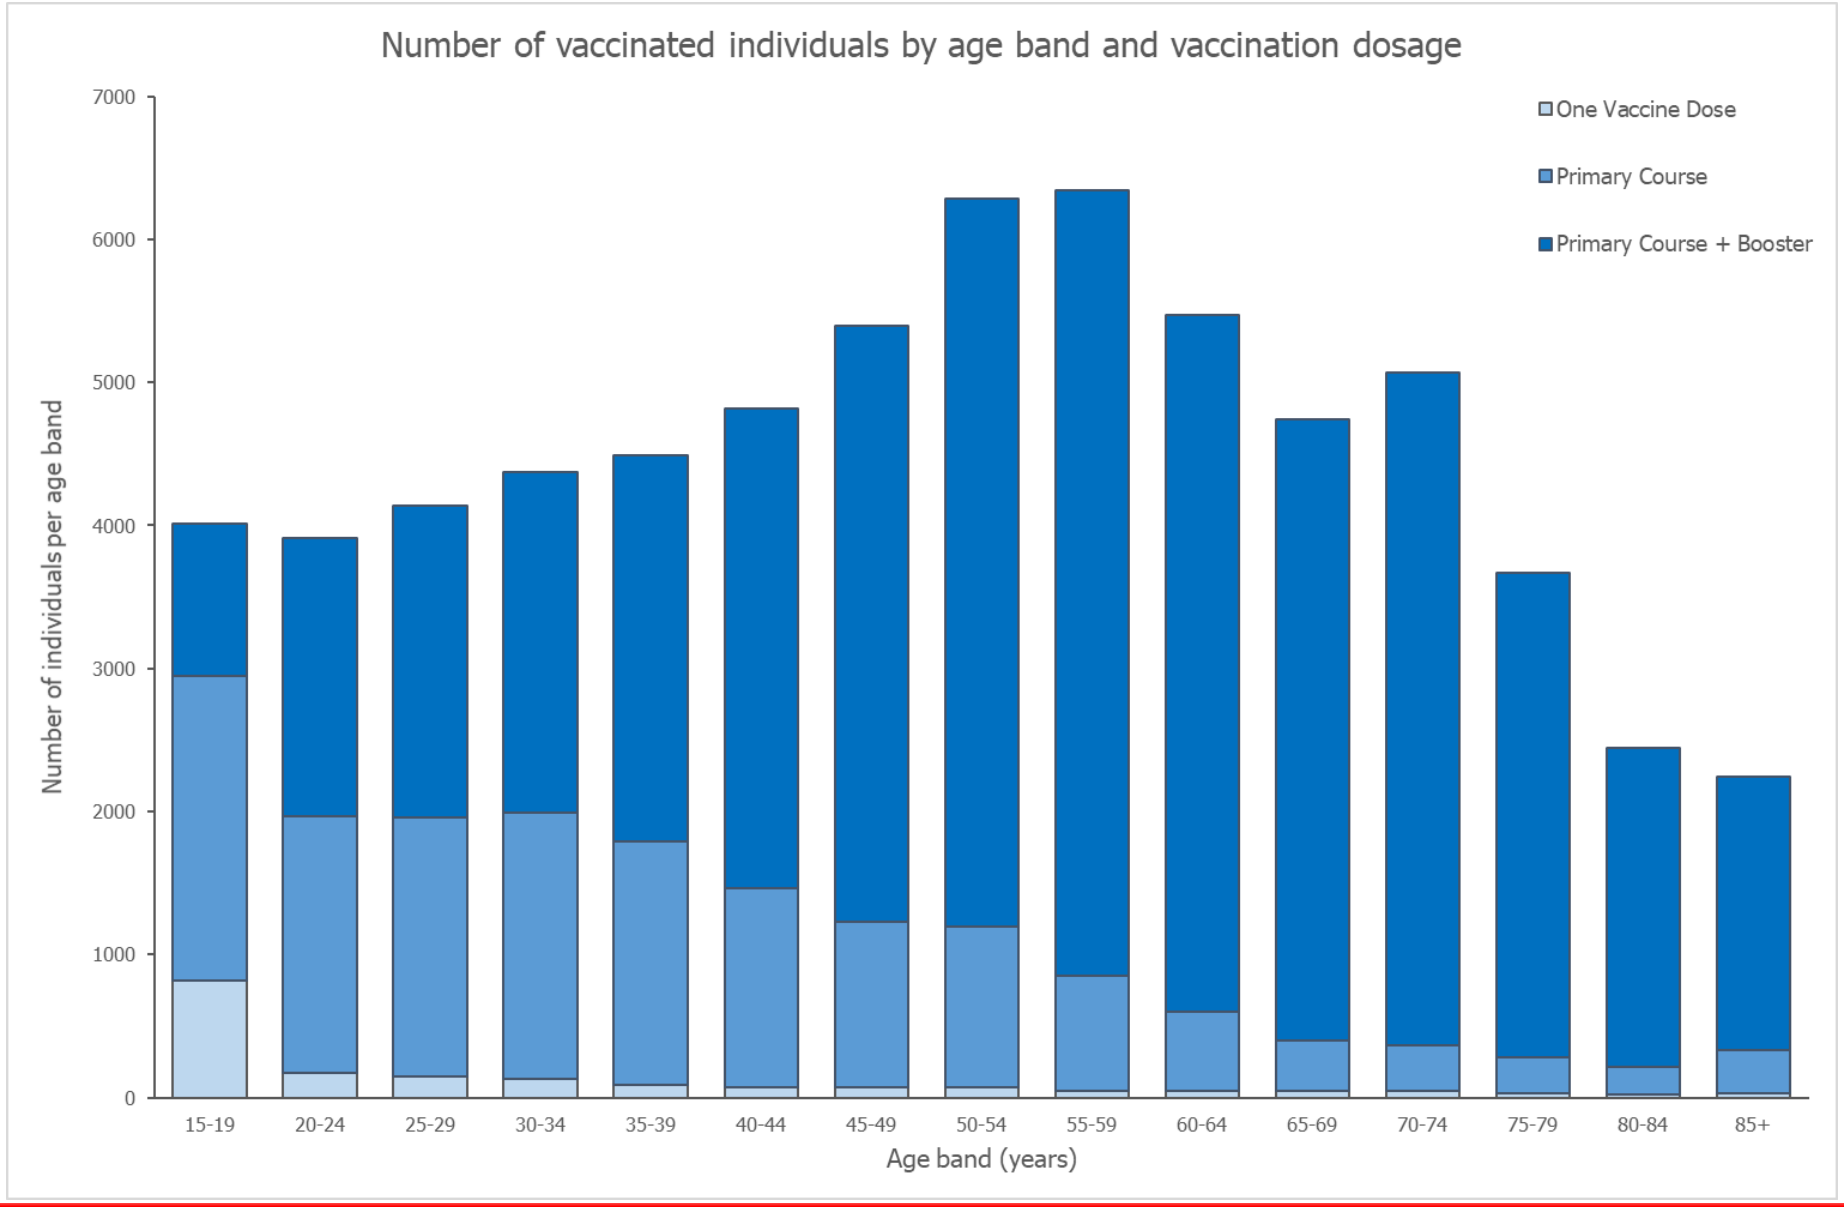

The Isle of Man (shown in red), has the highest 7-day notification rate per 100,000 population when included in the lower tier local authorities of the UK. It should be noted that the differences in testing availability on the Isle of Man compared to areas in the UK are likely to impact the 7-day notification rate data.

14-day Notification Rate Comparison

		Isle of Man			United Kingdom
Year	Week number	14-day rate	Lower CI	Upper CI	14-day rate
2021	40	874 . 96	867 . 84	882 . 08	778 . 05
	41	1136 . 04	1128 . 80	1143 . 29	805 . 89

	50	1299 . 51	1289 . 26	1309 . 77	1317 . 95
	51	1834 . 60	1807 . 69	1861 . 52	-
	52	4497 . 13	4417 . 01	4577 . 25	2753 . 48
2022	1	5851 . 91	5781 . 44	5922 . 39	-
	2	4170 . 19	4102 . 45	4236 . 94	2911 . 96
	3	2412 . 03	2372 . 78	2451 . 28	1824 . 83
	4	1561 . 76	1542 . 00	1581 . 53	2008 . 64
	5	1193 . 67	1176 . 69	1210 . 65	1594 . 05
	6	759 . 71	747 . 32	772 . 11	1429 . 55
	7	617 . 41	611 . 64	623 . 19	1179 . 00
	8	830 . 28	823 . 86	836 . 69	791 . 47
	9	1397 . 12	1381 . 42	1412 . 82	939 . 69
	10	2461 . 43	2437 . 40	2485 . 45	1293 . 95
	11	3743 . 30	3714 . 64	3771 . 95	1415 . 20
	12	4267 . 81	4230 . 67	4304 . 94	1357 . 28
	13	3951 . 91	3548 . 23	3634 . 95	1691 . 45
	14	2529 . 64	2498 . 87	2560 . 41	1329 . 78
	15	1760 . 51	1741 . 72	1779 . 30	570 . 02
	16	1364 . 19	1349 . 45	1378 . 93	563 . 56
	17	883 . 20	865 . 76	900 . 64	479 . 31
	18	461 . 00	455 . 68	466 . 33	217 . 36
	19	435 . 13	432 . 41	437 . 85	190 . 92
	20	434 . 17	431 . 63	436 . 70	153 . 85
	21	359 . 23	355 . 70	362 . 76	108 . 58
	22	336 . 63	333 . 05	340 . 21	108 . 02
	23	858 . 82	836 . 20	881 . 44	173 . 51
	24	2614 . 52	2563 . 50	2665 . 54	-

The 14-day rate is calculated by totalling new confirmed cases over the past 14-day period, dividing this number by the total population, and then multiplying by 100,000 to enable area comparisons. Please note that differences in testing availability between the Isle of Man and United Kingdom will likely impact the 14-day notification rate data.

Vaccine Uptake and Coverage

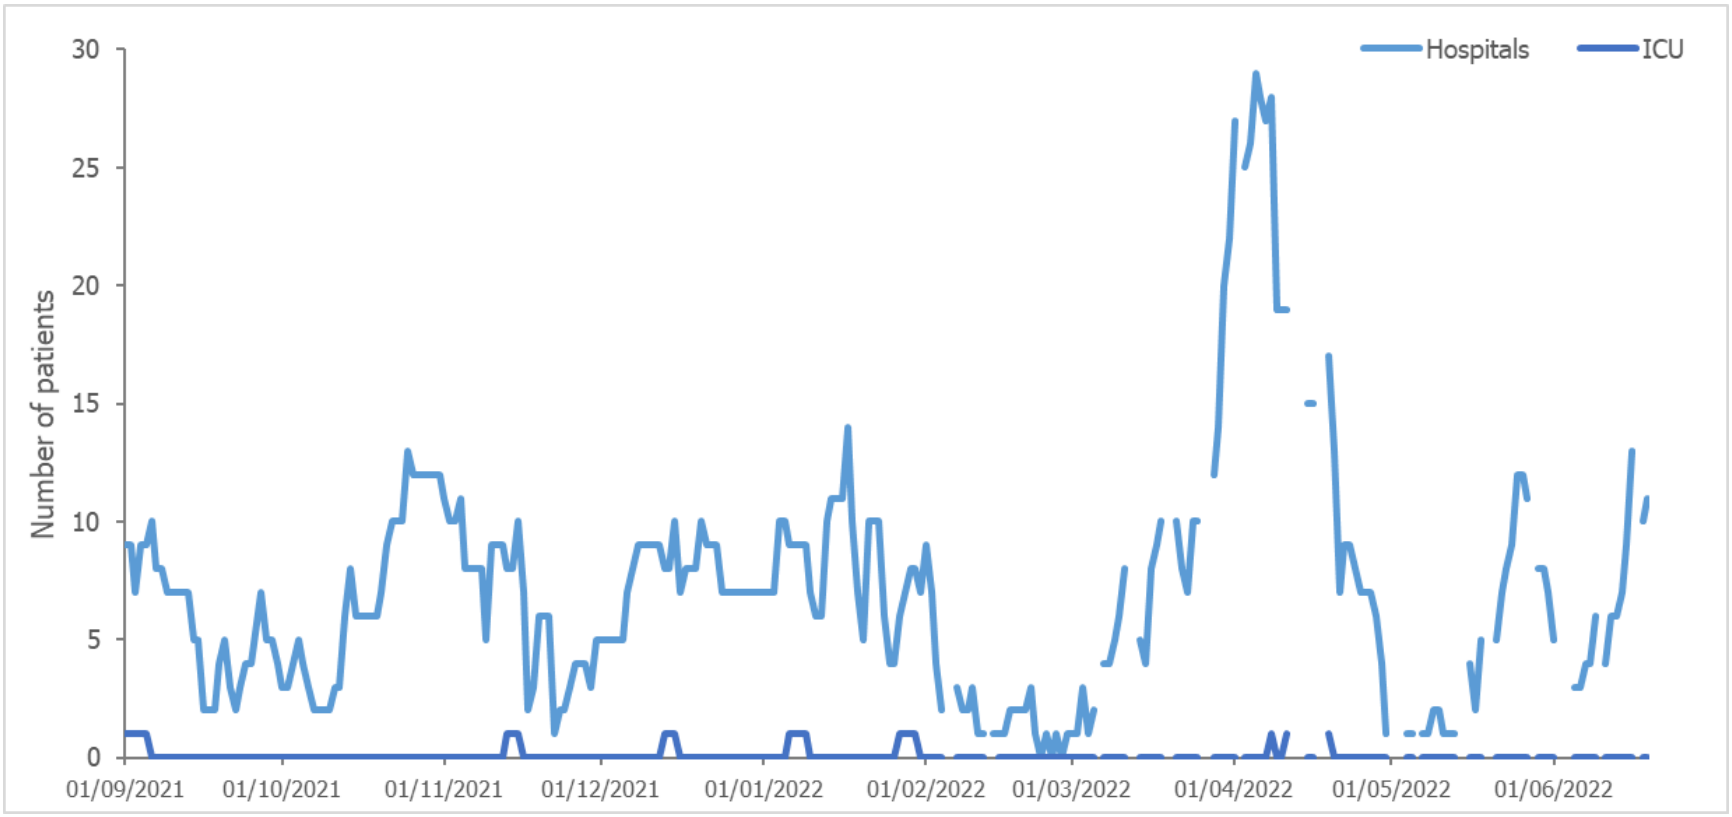

Vaccine Uptake and Coverage

This data uses the 2021 Census populations as reference for eligible population[3].

Hospitalised Patients

Patients in both Nobles Hospital and Ramsey Cottage Hospital with a confirmed COVID-positive status at the time of the daily snapshot, taken at 12pm.

Hospitalised Patients

SUMMARY

Total Patients	**18**

Vaccination Status of Hospital Admissions	
Primary Course + Booster(s)	78%
Primary Course	11%
One Vaccine Dose	0%
Unvaccinated	11%

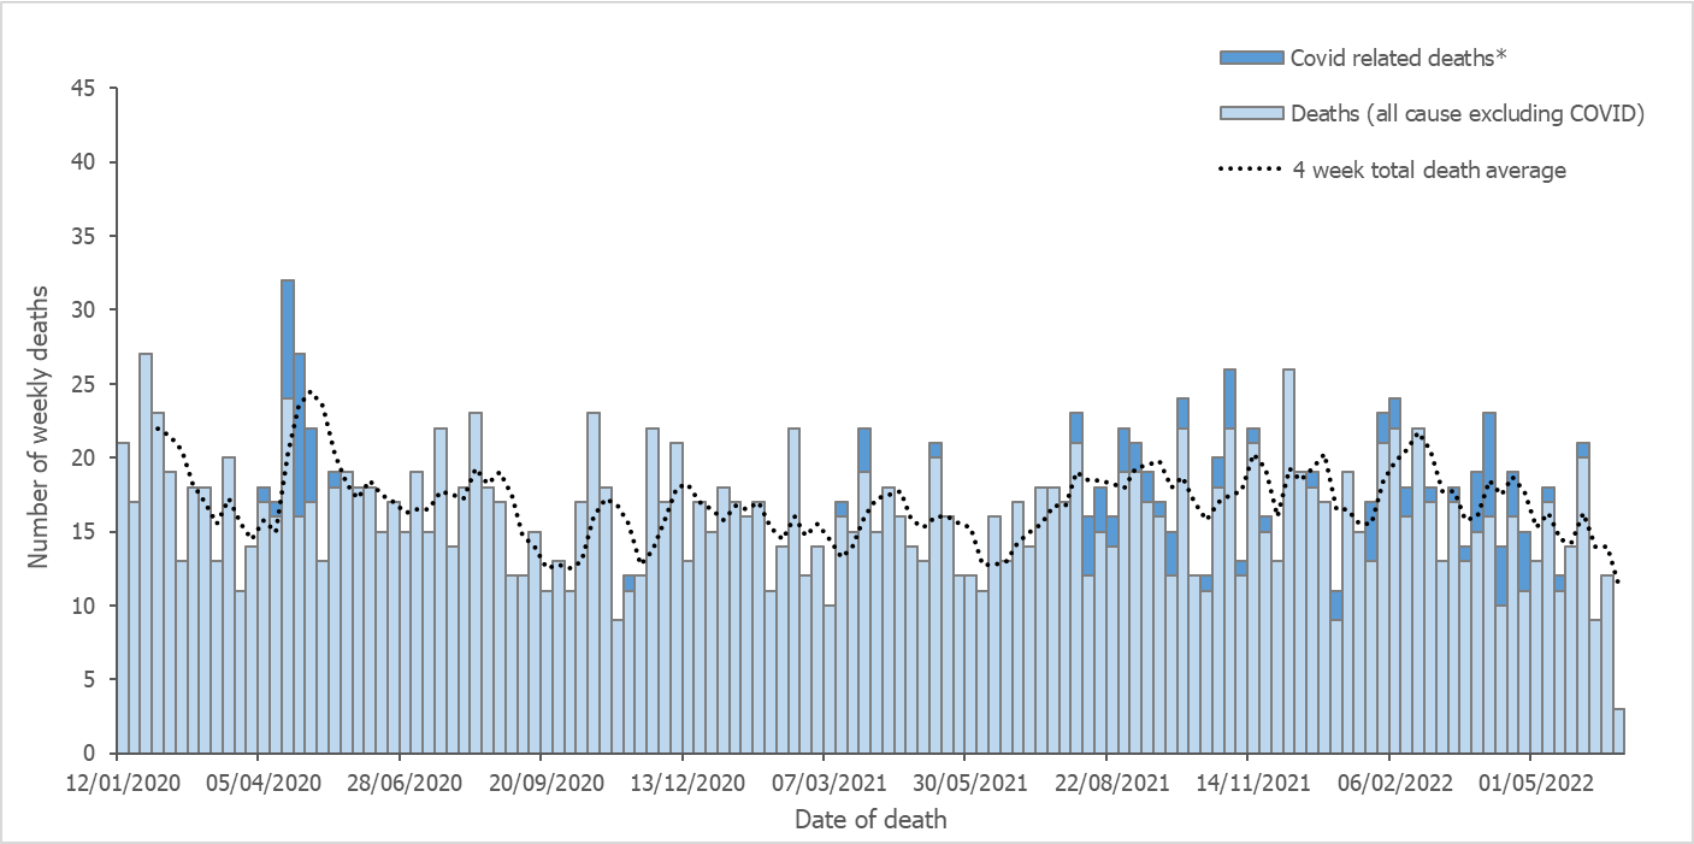

Snapshot – 21/06/2022

Hospitalised Patients

The following information has been supplied by Manx Care:

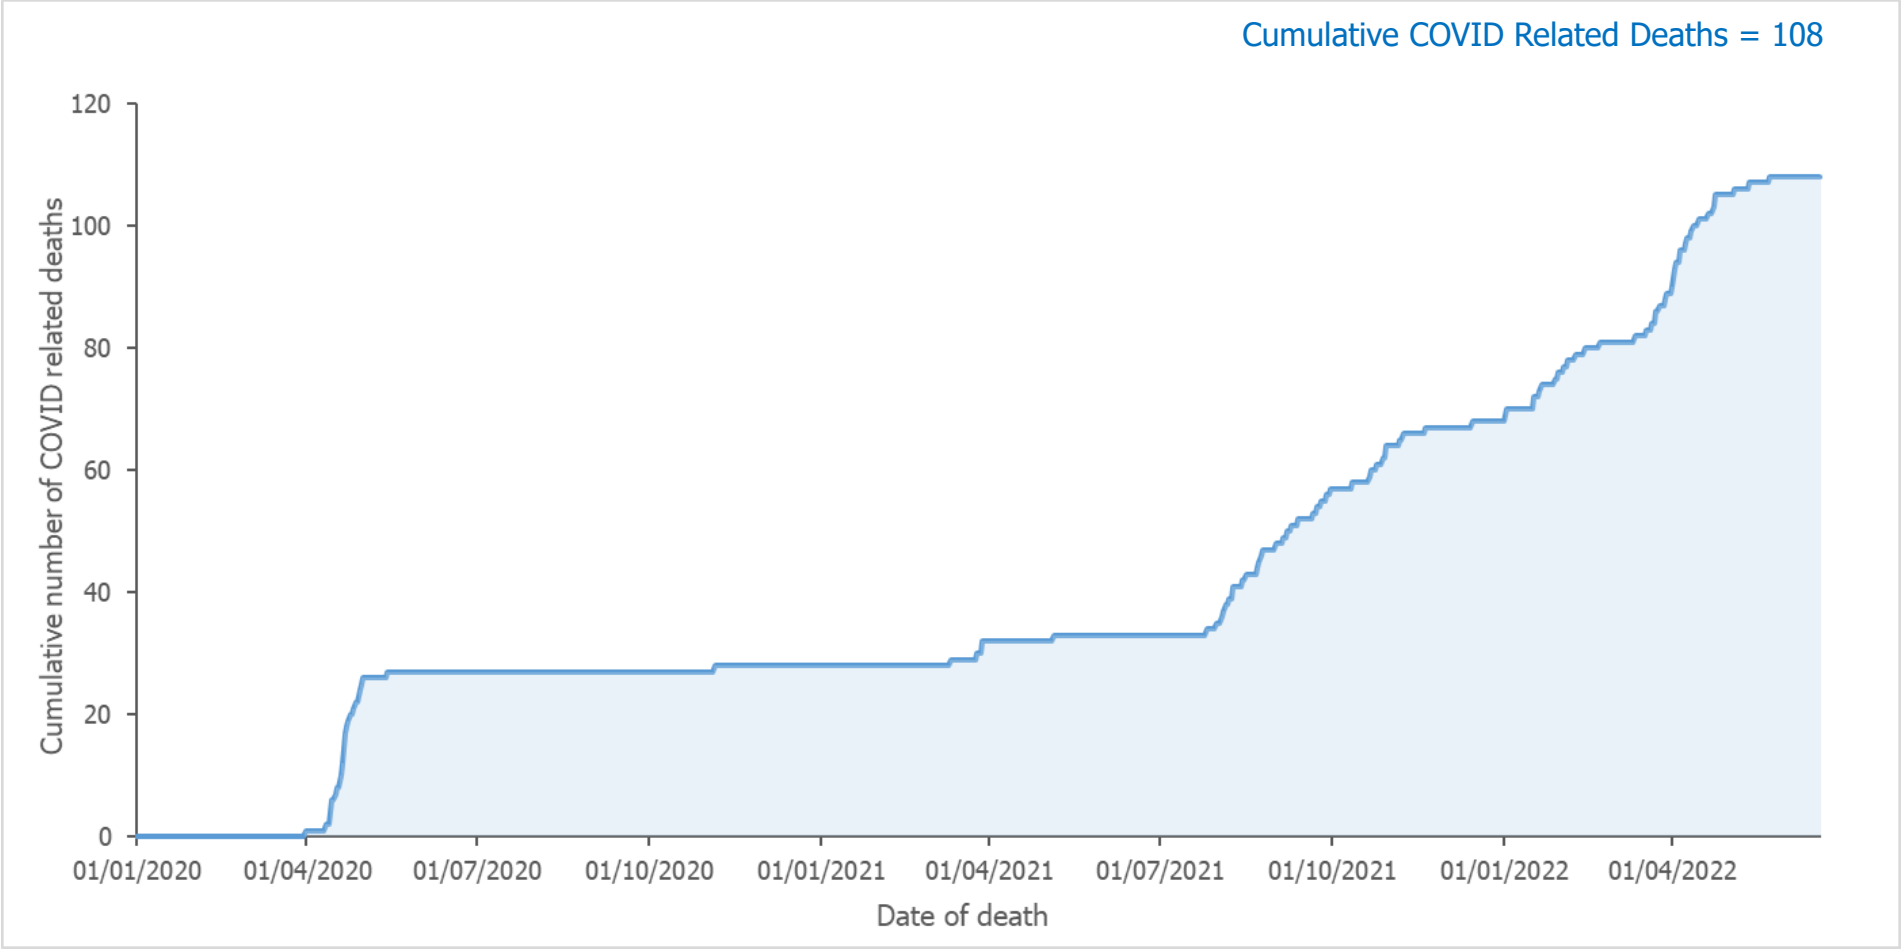

- At the time of information provision (10:00 21/06/22), there are 18 patients currently in Nobles Hospital who have tested positive for COVID-19.
- 4 were admitted for treatment of their COVID-19 infection and 14 were admitted for other reasons.

Weekly Deaths – Whole Pandemic

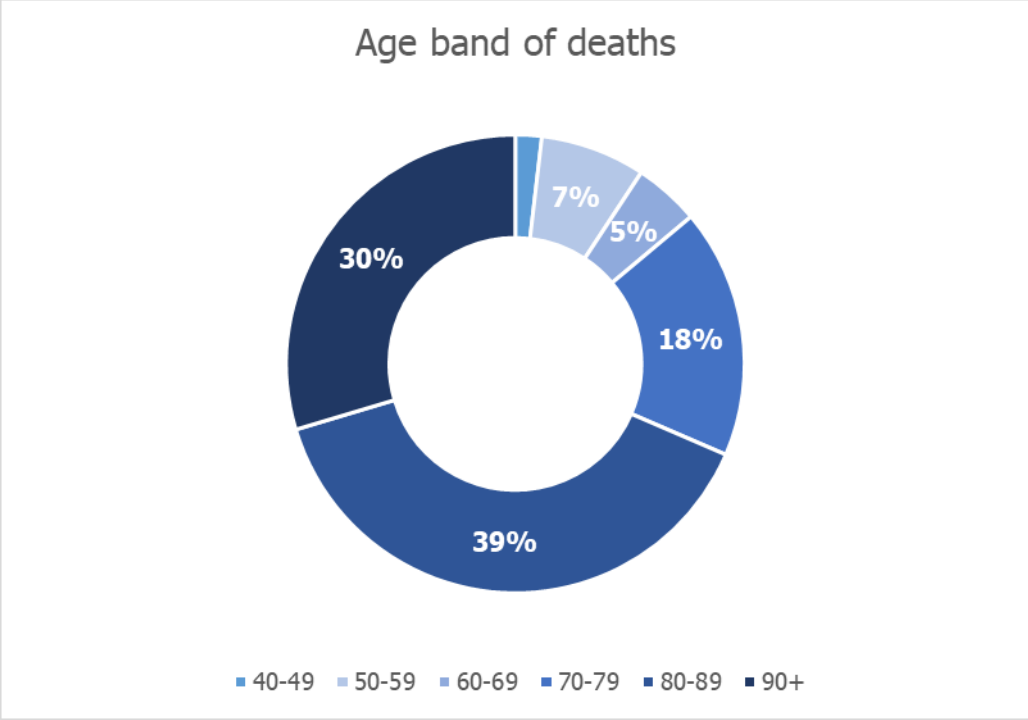

- *COVID related deaths are those where COVID-19 is mentioned **anywhere** within the death certificate.
- **Death registrations are often delayed** and therefore deaths occurring in a given week may not be input into the week of which death occurred until a later date, meaning figures are likely to change retrospectively as data is updated. This also means that the most recent numbers will be incomplete at the time of release, and will update in subsequent reports.
- Cumulative COVID-19 related deaths stands at 108.

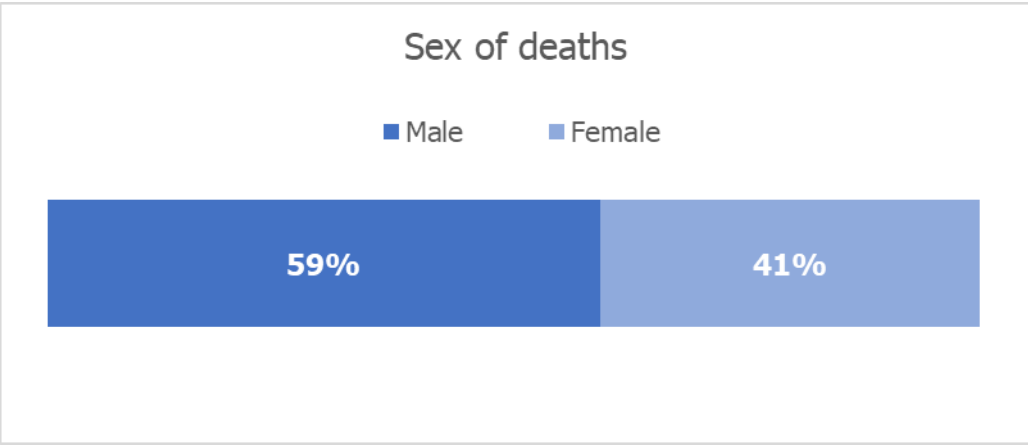

Cumulative COVID-Related Deaths

COVID-Related Deaths Overview

Age band of deaths	No. of deaths	% of total deaths
40-49	2	1.9%
50-59	8	7.4%
60-69	5	4.6%
70-79	19	17.6%
80-89	42	38.9%
90+	32	29.6%

Place of death	No. of deaths
Hospital	52
Hospice	4
Nursing/Residential Home	41
Domestic Property	11

Arrivals Testing

From the 1st April, arrivals testing requirements are as follows:

As of 1 April 2022 there are no travel related restrictions on the Isle of Man.

You **do not** need to:

- complete a travel declaration form before you travel to the Isle of Man from abroad
- take any COVID-19 tests before you travel or after you arrive
- isolate when you arrive

This applies whether you are vaccinated or not.

Other countries may have rules about what you need to do to leave the country to travel to UK/ Isle of Man. You should check travel advice for the country you are travelling from.

Definitions

Vaccination Status

- One dose = those who have received only one dose
- Primary Course = those who have received a full course (two or three dose). Third dose, those with immunosuppression only.
- Primary Course + Booster = a full course plus a booster
