COVID-19 Surveillance Summary, Oklahoma

Surveillance Component	Week Ending August 12, 2023	Week Ending August 5, 2023	Week Ending July 29, 2023
COVID-19 Percent Positivity	14	12.9	9.8
Facilities Reporting COVID-19 Outbreak Testing/Case Clusters	12	4	1
Geographic Spread	Widespread	Widespread	Regional
Number of COVID-19 Associated Hospitalizations	16	24	8

COVID-19 Associated Hospitalizations and Laboratory Testing Percent Positivity by Week of Positive COVID-19 Test, Oklahoma, 2022-2023

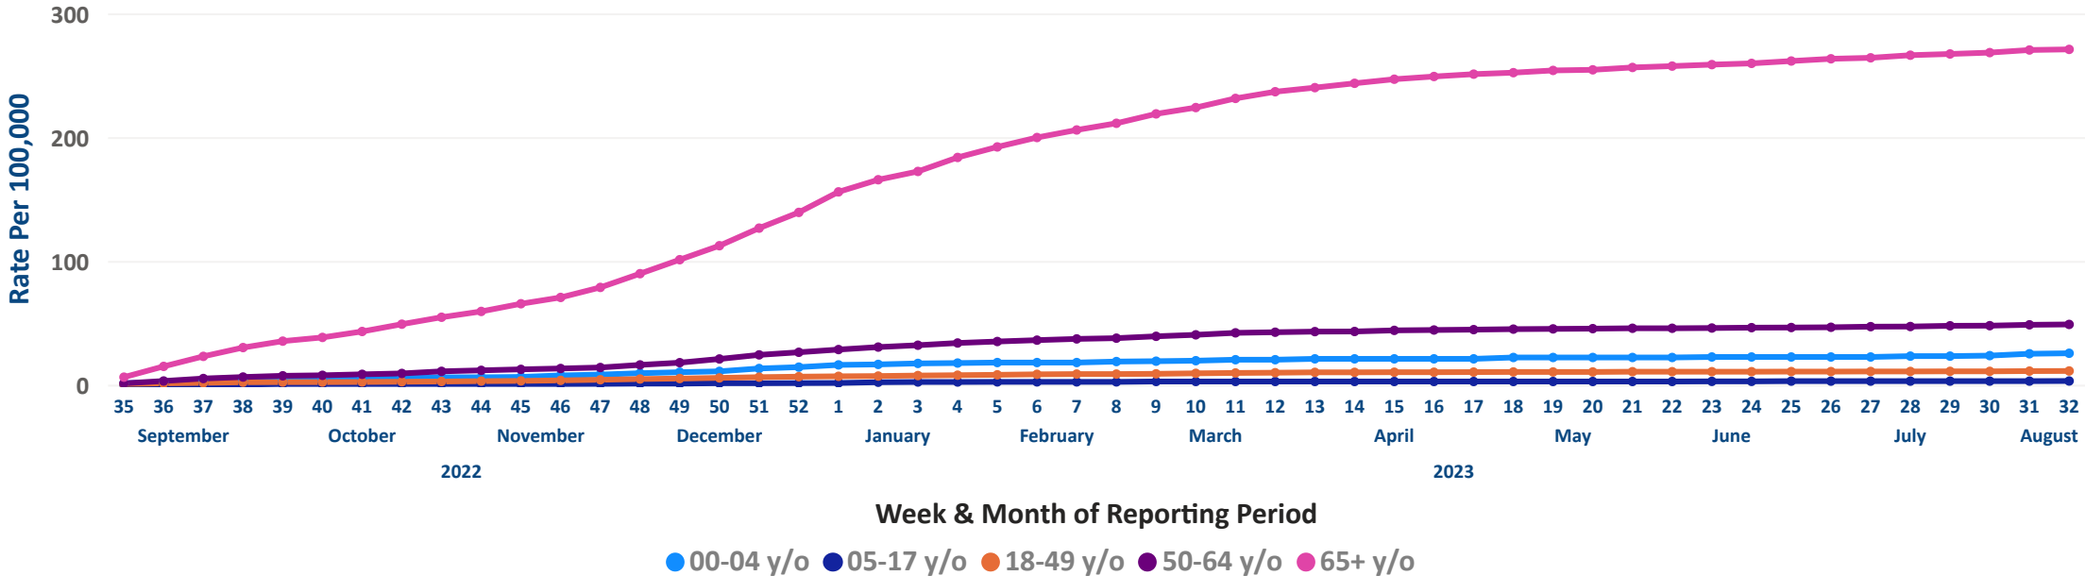

COVID-19 Sequencing: Monthly Proportions of Variant Lineages, Oklahoma, January 1, 2022 - August 12, 2023

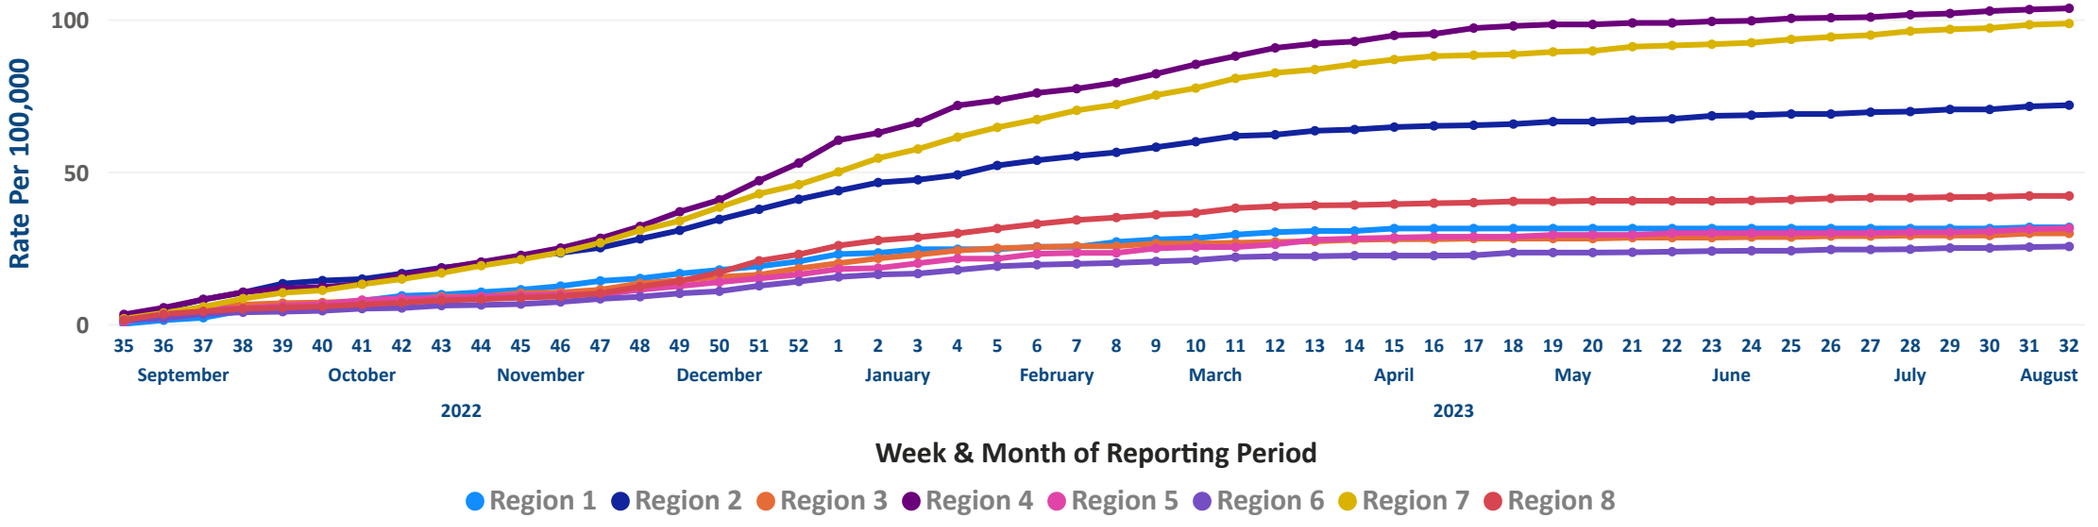

Oklahoma Viral Respiratory Disease Report, Data from week ending August 12, 2023, Week 32

Cumulative COVID-19 Hospitalization Rate Per 100,000 by Age Group, Oklahoma, 2022-2023

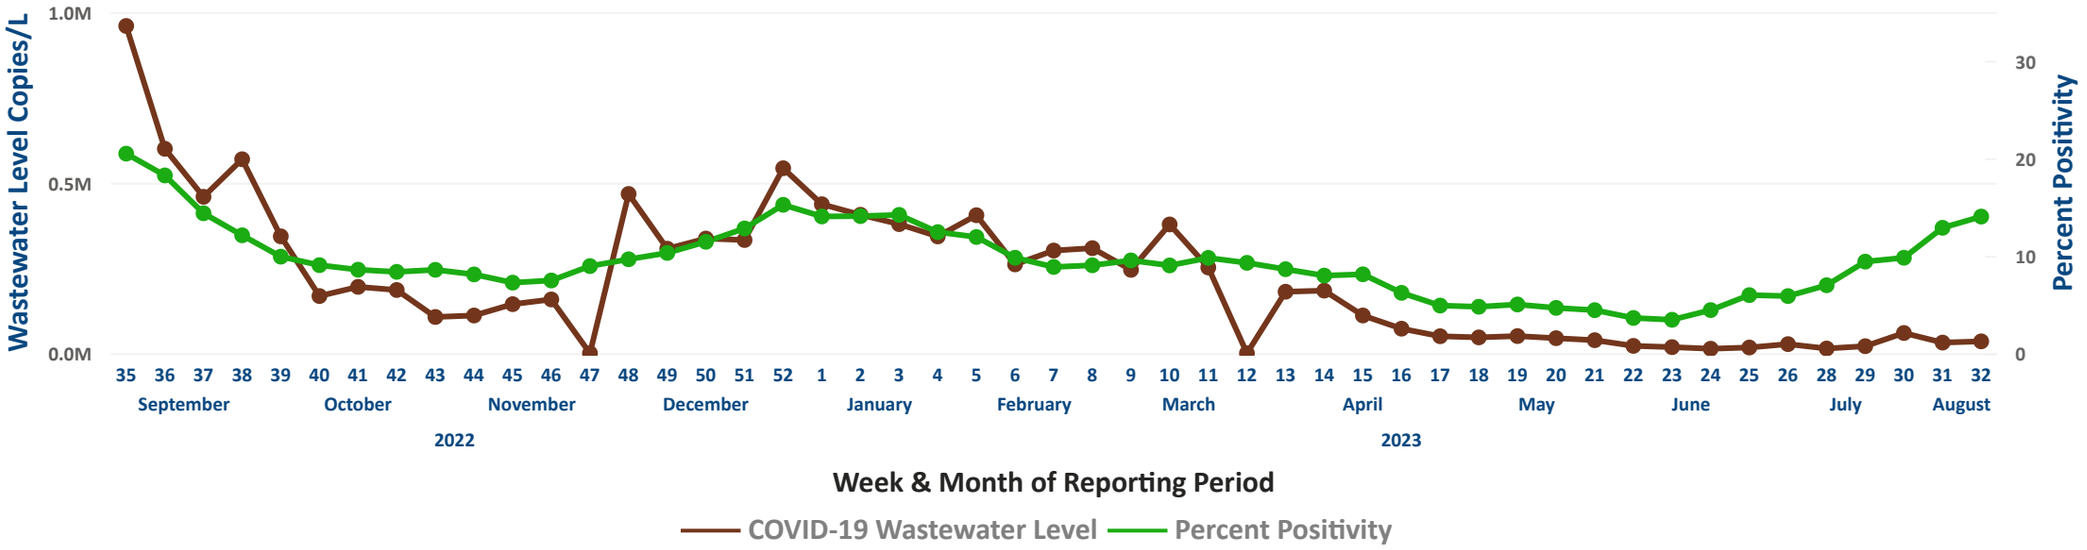

Cumulative COVID-19 Hospitalization Rate Per 100,000 by HHS Region, Oklahoma, 2022-2023

Oklahoma Viral Respiratory Disease Report, Data from week ending August 12, 2023, Week 32

Comparison of COVID-19 Wastewater Levels and COVID-19 Laboratory Testing Percent Positivity, Oklahoma, 2022-2023

Wastewater from a sewer shed (the community area served by a wastewater collection system) is collected as it flows into a treatment plant. Wastewater surveillance captures presence of Influenza shed by people with and without symptoms. ≤1250 Copies/L is a non-detect. Wastewater data collected in partnership with University of Oklahoma and OU Health Sciences Center.

COVID-19 Surveillance Summary, Oklahoma

Wastewater	Percent Positivity	Hospitalizations	Overall Activity
Plateau	Increasing	Increasing	Increasing
