RSV Hospitalizations

The Oregon Health Authority conducts year round population-based surveillance for laboratory-confirmed hospitalizations associated with RSV in Clackamas, Multnomah, and Washington counties. To date, 397 hospitalizations have occurred during the 2024-2025 season. There were 11 hospitalizations reported during 03/02/2025 - 03/08/2025. The cumulative hospitalization rate for the 2024-2025 season is 21.9 per 100,000 people.

Published: 3/12/2025

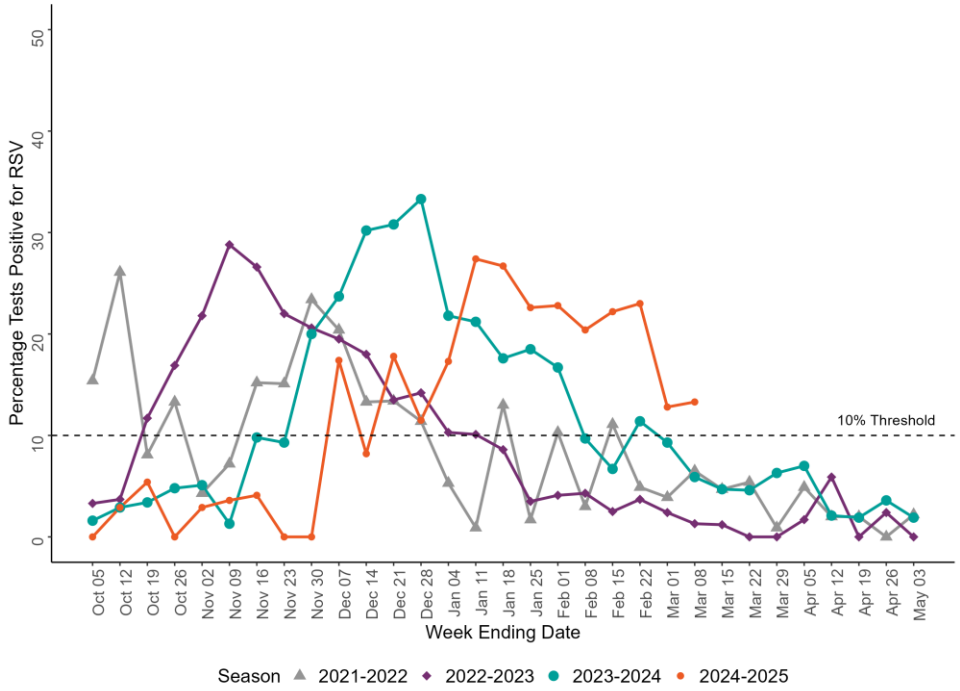

Laboratory Data

Oregon has met criteria for RSV season onset on December 21, 2024. As defined by CDC, the RSV season onset is the first of two consecutive weeks during which the mean percentage of specimens testing positive for RSV antigen is ≥10% or the mean percentage of specimens testing positive for RSV by PCR is ≥3%, whichever occurs first. 24 laboratories in Oregon and southwest Washington participate in sentinel laboratory surveillance by reporting the numbers of RSV tests conducted and the number positive.

13.3 % of antigen tests and 7.2 % of PCR tests were positive during 03/02/2025 - 03/08/2025 .

65 yrs+	41	13.7

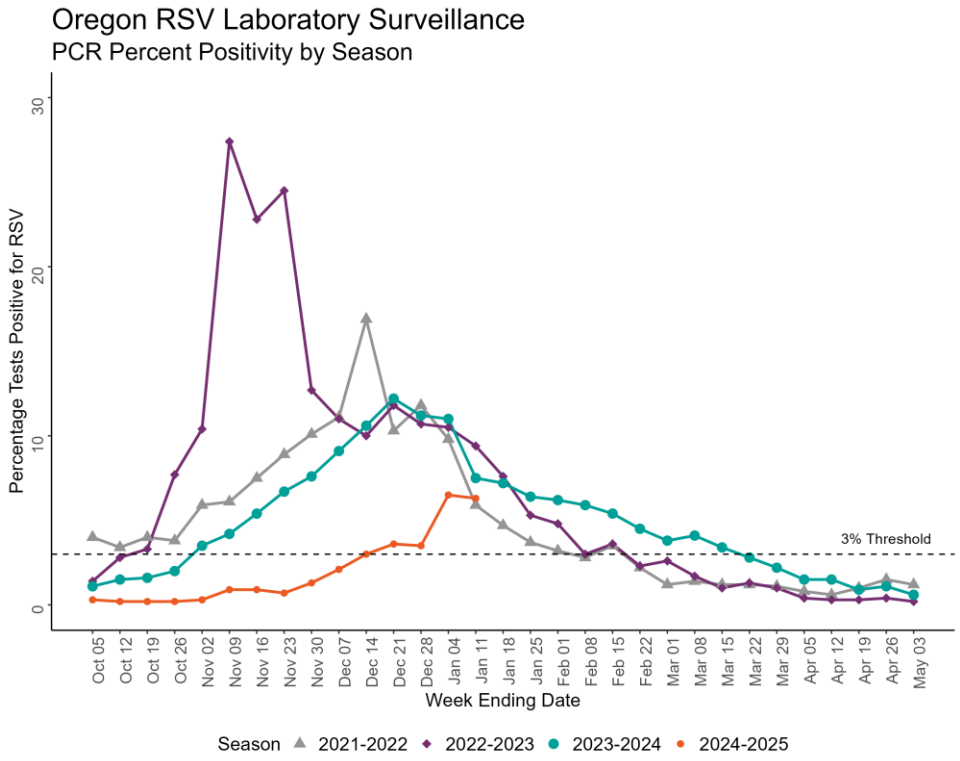

Laboratory Data

Oregon met criteria for RSV season onset on December 21, 2024. As defined by CDC, the RSV season onset is the first of two consecutive weeks during which the mean percentage of specimens testing positive for RSV antigen is ≥10% or the mean percentage of specimens testing positive for RSV by PCR is ≥3%, whichever occurs first. 24 laboratories in Oregon and southwest Washington participate in sentinel laboratory surveillance by reporting the numbers of RSV tests conducted and the number positive.

29.5 % of antigen tests and 6.3 % of PCR tests were positive during 01/05/2025 - 01/11/2025 .

RSV Hospitalizations

The Oregon Health Authority conducts year round population-based surveillance for laboratory-confirmed hospitalizations associated with RSV in Clackamas, Multnomah, and Washington counties. To date, 7 hospitalizations have occurred during the 2024-2025 season. There were 2 hospitalizations reported during 11/03/2024 - 11/09/2024. The cumulative hospitalization rate for the 2024-2025 season is 0.4 per 100,000 people.

Laboratory Data

Oregon has not yet met criteria for RSV season onset. As defined by CDC, the RSV season onset is the first of two consecutive weeks during which the mean percentage of specimens testing positive for RSV antigen is ≥10% or the mean percentage of specimens testing positive for RSV by PCR is ≥3%, whichever occurs first. 24 laboratories in Oregon and southwest Washington participate in sentinel laboratory surveillance by reporting the numbers of RSV tests conducted and the number positive.

0.0 % of antigen tests and 0.6 % of PCR tests were positive during 11/03/2024 - 11/09/2024.
