The table below includes weighted estimates of variant proportions by state/jurisdiction collected over the **four weeks ending 4/2/2022**.
This analysis represents a different collection period and length of time, four weeks, compared to the weighted estimates shown above at the national and regional level which are calculated by week.

State/Jurisdiction	Total Sequences	B.1.1.529 (Omicron)	BA.2 (Omicron)	BA.2.12.1 (Omicron)	B.1.617.2 (Delta)	B.1.1.7 (Alpha)	Other

Table includes weighted estimates of variant proportions from sequences collected over the **four weeks ending 4/2/2022** obtained through CDC genomic surveillance (NS3 and CDC-funded sequencing contracts) and tagged baseline surveillance sequencing submitted to public repositories by state, local, academic, or commercial laboratories. The four week timeframe used for the analysis will roll forward each week. Variants with zero observations in all jurisdictions are not enumerated in this chart (B.1.351/Beta, P.1/Gamma, P.2/Zeta, B.1.427/429/Epsilon, B.1.525/Eta, B.1.526/Iota, B.1.617.1/Kappa, B.1.617.3, AY.1/Delta, AY.2/Delta, B.1.621/Mu). Pango lineages Q.1, Q.2, and Q.3 are sublineages of Alpha B.1.1.7 and are included in the proportions of B.1.1.7. Delta B.1.617.2 sublineages AY.3 - AY.133 and their sublineages are included in the parental B.1.617.2. Omicron sublineages BA.1, BA.3, BA.4, BA.5 and their sublineages are aggregated with B.1.1.529. Except BA.2.12.1, BA.2 sublineages are aggreagated with BA.2.
* Other represents weighted estimates for variants not designated as a variant of concern (VOC), variant of interest (VOI), or variant being monitored (VBM)...
