Table includes weighted estimates of variant proportions from sequences collected over the **four weeks ending 4/16/2022** obtained through CDC genomic surveillance (NS3 and CDC-funded sequencing contracts) and tagged baseline surveillance sequencing submitted to public repositories by state, local, academic, or commercial laboratories. The four week timeframe used for the analysis will roll forward each week. Variants with zero observations in all jurisdictions are not enumerated in this chart (B.1.1.7/Alpha, B.1.351/Beta, P.1/Gamma, P.2/Zeta, B.1.427/429/Epsilon, B.1.525/Eta, B.1.526/Iota, B.1.617.1/Kappa, B.1.617.3, AY.1/Delta, AY.2/Delta, B.1.621/Mu).
Delta B.1.617.2 sublineages AY.3 - AY.133 and their sublineages are included in the parental B.1.617.2. Omicron sublineages BA.1, BA.3, BA.4, BA.5 and their sublineages are aggregated with B.1.1.529. Except BA.2.12.1, BA.2 sublineages are aggreagated with BA.2.
* Other represents weighted estimates for variants not designated as a variant of concern (VOC), variant of interest (VOI), or variant being monitored (VBM).
† Estimates are less reliable based on one or more violations of NCHS data presentation standards for proportions: number of sequences submitted by state in four-week time period was < 30, absolute confidence interval with > 0.3 and/or relative confidence interval width > 130%. See https://www.cdc.gov/nchs/data/series/sr_02/sr02_175.pdf
